Course Objective

The main objective of this course is to equip the students with the ability to solve, assemble and test simple AC and DC electrical circuits. Further, the course also enables the student to obtain a basic understanding of the working principle and applications of electronics devices.

Course Outcomes

After completion of the course, students will be able to

- 1. interpret DC circuits, theorems and time domain analysis of first order RL circuit
- 2. solve series and parallel AC circuits and compare star/delta configurations
- 3. explain the principles of transformer and electrical machines
- 4. understand the construction, working principle and applications of electronics devices and logic circuits

Detailed Syllabus

Unit	Description	Duration
1.	DC Circuits	6
	Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff's current law, Kirchhoff's voltage laws, Analysis of simple circuits with dc excitation, Superposition Theorem, Thevenin's Theorems, Norton's Theorems. Time-domain analysis of first-order RL circuits.	
2.	AC Circuits	8
	Generation of alternating emf, instantaneous, rms, peak, average values and related other terms, vector representation of AC quantities, Steady state analysis	

YMM

Signature (Prepared by Concerned Faculty/HOD)

	of R, L, C series and parallel circuits, resonance. Generation of three-phase emf,						
	star connection, delta connection, relationship between line and phase quantities.						
3.	Transformers and Electrical Machines	6					
	Construction and working of single-phase transformer Ideal and practical						
	transformer, equivalent circuit, Losses in transformers, Generation of rotating						
	magnetic fields, Construction and working of a three-phase induction motor,						
	Single-phase induction motor, construction and working, DC motor construction, working and types.						
4.	Analog Electronics (no mathematical treatment and design)	5					
	Half and full wave rectifiers, special purpose diodes -zener regulator, BJT and its						
	applications, amplifier, oscillator, overview of opto-electronics devices, opto-						
	couplers, concepts of transducer, Operational amplifier (IC-741), Inverting and						
	Non-Inverting, Comparator, Timer (IC-555) and multivibrators.						
5.	Digital Electronics	5					
	Logic gates, concept of universal logic; implementation of Boolean expressions						
	using logic gates, application of digital circuits: e.g., adder, subtractor,						
	multiplexer, de-multiplexer, Analog to Digital Converter, Digital to Analog						
	Converter.

Pre-requisite:-							

Course Objective

The course would enable students to get a brief introduction of the Indian Constitution and its principles. The students would have knowledge of concept of 'State' and interdependencies of its institutions vis a vis their relation with fundamental rights.

Course Outcomes

After completion of the course, students will be able to-

- 1. Understand the historic evolution of the Indian Constitution, its drafting, nature and to understand the principles mentioned in its Preamble
- 2. Inculcate fundamental rights in its true sense and also the permissible restrictions upon it so as to enjoy these rights within permissible limits while simultaneously performing their duties and to apply these principles into their professional lives
- 3. Ingrain the structure of our polity and role of Judiciary in maintaining the basic structure of the Constitution
- 4. Attain knowledge of the Emergency provisions, when and how it is imposed, to know the additional powers the bestowed upon the Government at times of Emergency and to understand the Amendment procedure

Detailed Syllabus Unit Description Duration 1. Nature, Characteristics and Sources of Indian Constitution 02 2. Fundamental rights and Fundamental duties - Concept of State, Right to Equality under Articles 14 and 15, Right to certain freedoms under Article 19, 06 Right to Life and liberty under Article 21, Right to religion under Article 25 and 26, Right to remedy under Article 32 and Fundamental duties 3. Indian Judiciary - Concept of Supreme Court and High Courts, Appointment of Judges, Independence of Judiciary, Jurisdictions of Supreme Court and 03 **High Courts** Emergency Provisions - Concept of National Emergency under Article 352, 4. Financial Emergency under Article 360 and President rule under Article 356 of 04 the Constitution

Course Obje	ctive						
The course a	ims to introdu	ce digital fab	rication to	ols and	d methods. It fan	niliarizes the s	students with
various prin	nciples of 3D j	printing along	g with so	lid mo	deling, part slic	ing and fabr	ication using
Fused depo	sition modellin	ig (FDM) prod	cess.				
Course Out	comes						
After comp	etion of the co	urse, students	will be a	ble to -	,		
1. Desc	ribe FDM Tech	nology					
2. Prep	are given mod	el for 3D prin	ting				
3. Crea	te products of	complex geor	netries us	ing 3D	printer

Laboratory Work

6 to 8 laboratory exercises (and a mini project) based on the syllabus.

List of Experiments

- 1) To design an object using an open source software (Tinkercad).
- 2) To understand the working of slicing software (Repetier Host)
- 3) To examine the effect of layer thickness, infill density and orientation on build time and material consumption.
- 4) To generate code for designed object using Repetier host software for 3D printing.
- 5) To study the components of a Fused Deposition Modeling (FDM) 3D Printing machine.
- 6) To prepare FDM machine for printing the given object.
- 7) To print object using FDM machine.
- 8) To carry out post processing on the printed object.
- 9) To evaluate the effect of overhang angles on build quality of polylactic acid (PLA) and Acrylonitrile butadiene styrene (ABS) parts made using FDM.
- 10) To build parts of same geometry in PLA and ABS and compare the bending strength.
- 11) To create an object using lithophane technique.
- 12) Mini project.

Labora	atory Work	
	6 to 8 laboratory exercises (and a practicum) based on the syllabus.	
	List of experiments:	
1.	To identify electronic components with specification (Functionality, type, size, color	coding,
	package, symbol, cost etc). (wires, Cables, Connectors, Fuses, Switches, Relays, Heat	sink etc.)
2.	To understand and use measuring and testing instruments (Mutimeter, Function gen	erator,
	Power supply, Digital Storage Oscilloscope)	
3.	To design PCB schematics using suitable software.	
4.	To fabricate single sided PCB for a simple electronic circuit.	
5.	To assemble and test an electronic circuit.	
6.	To study functioning of circuit breakers.	
7.	Experiment based on house hold wiring of appliances such as fan, tube light etc.	
8.	Dis-assemble and assemble of PC.	
9.	To configure LAN, switch and router for network topology.	
10.	To simulate and implement simple applications using ARDUINO.	
11.	Practicum

The know understa devices a aims to r foundation Course C After com 1. ref a 2. ic an 3. de	 Course Objective The knowledge of Physics relevant to engineering is critical for converting ideas into technology. An understanding of Physics also helps engineers understand the working and the limitations of existing devices and techniques, which eventually leads to new innovations and improvements. This course aims to make students understand the basic concepts of Physics thoroughly with a view to lay foundations for the various engineering courses. Course Outcomes After completion of the course, students will be able to- 1. relate and interpret the relationship and interaction between the nature and the matter with a scientific outlook 2. identify and apply different processes of physics that have wide applications in industrial and technological sectors 3. develop creative thinking, problem solving abilities and considerable scientific skills, viz.

Pre-requisite	Theory of semi	conductor mate	rials, their ato	mic structures and proper	ties DC circuit	
	analysis and AC	C fundamentals.				
Course Obje	tive					
The aim of the	e course is that t	he student shoul	d understand	l working principle, charac	teristics and simple	
applications of	of basic electron	ic devices. The c	ourse also he	elps students to understand	d the application of	
these devices	in advanced cir	rcuits such as ar	nplifiers. It a	lso intends to impart hand	ds on experience in	
assembling a	nd testing simpl	e circuits				
Course Outco	omes					
After comple	ion of the cours	e, students will	be able to -	. 1		
I. Exami	ne the working	of P – N junction	$\frac{1}{1}$ 1 1 $\frac{1}{2}$	ts applications	¬ •.	
2. Differ	entiate various o	configurations ai	nd biasing cir	cuits of Bi-polar Junction I	ransistor	
3. Recog	nize various typ	bes of Field Effec	t I ransistors	and its configurations		
4. Descr	be various basic	c digital electron	ic circuits

Course Obj The aim of Pipeline, Pr techniques. different so	Course Objective The aim of the course is to provide students with the knowledge of Creating Data Science Pipeline, Preparing the data, performing exploratory data analysis and apply visualization techniques. It will also educate students on preprocessing various types of information from different sources within the integrated development environment								
Course Outcomes After completion of the course, the student will be able to - 1. Explain the role of python in data science 2. Apply the python libraries to execute, visualize and analyse data in python ecosystem 3. Analyze raw data and perform wrangling to improve data usability									
Detailed Sy	llabus								
Unit	Description						Duration		
1	Overview of P Basics of Pyth expressions, ob	ython ion and its i pjects and fur	role in data actions.	science, data	types,	variables,	01		
2	2 Working with Real Data 2 Accessing Data in Structured Flat-File Form ,Reading from a text file 02 Reading CSV delimited format, Reading Excel.					02			
3 1 1	3 NumPy Basics Arrays and Vectorized Computation Multidimensional Array Object, Operations between Arrays and Scalars, Basic Indexing and Slicing. 02					02
